

CAPABILITY STATEMENT

Background

With over twenty years of industry, local and state government experience in environmental and waste management John Brennan BSc.(Hons.) can add value to your business. John's management expertise with waste operations, tendering, marketing, industry regulations and systems can assist your business to keep costs down, reduce environmental risk, improve its environmental profile and achieve sustainable outcomes.

Core Competencies

With John's knowledge and experience your business will benefit from:

Keeping waste management costs down

The cost of managing waste is increasing and in this carbon-constrained economy future transport and disposal costs and regulatory requirements will have a greater financial impact. Analysing your current system, including your contractor(s) performance, can be revealing and often lead to immediate savings that flow to your bottom line.

Improved operational and compliance efficiency for waste services

Achieving efficiency and meeting environmental obligations through the review and implementation of operational procedures, benchmarking and continual improvement leads to lower environmental risk and better business outcomes.

Hazardous waste solutions

Potential costs and risks associated with hazardous waste can be high. Eliminating these wastes and dealing with them in a timely and cost effective manner is achievable.

Improved environmental outcomes for business sustainability

Keeping control over waste costs, through avoiding waste, adopting re-use/recycling, implementing procedures to control risk, meet environmental obligations and improve work place efficiency will lead your business to a sustainable future.

Services

Specialist services include:

- Waste contract and tender service reviews
- On site waste and recycling system reviews
- Environmental advocacy and representation to improve business profile
- Hazardous waste/chemicals and soil remediation solutions
- Medical, Quarantine and Antarctic waste expertise
- OHS, Environmental and Quality procedural development, delivery and review

Achievements

Through senior management experience John has been associated with numerous strategic projects, stakeholder representation and operational procedural implementation within the waste sector. Some notable achievements include:

Clean up of Antarctica - A unique project, John was responsible for brokering a \$2M philanthropic deal between private enterprise and the Australian Antarctic Program to assist in cleaning up legacy waste in Antarctica. John worked in Antarctica for six months with scientists and logistics to extract an old landfill that required remediation.

Hazardous Waste Collection Services - The development, expansion and diversification of a statewide hazardous waste service, including soil remediation capability, was implemented and adopted primarily through John's efforts.

Triple External Accreditation - John was the driving force behind the first waste and recycling company in Tasmania to achieve and maintain triple external accreditation for QA, OHS & Environment. No environmental penalties were ever issued under John's management.

Profile within Environmental Sector – John has contributed technical input and innovative ideas for tenders. His business development, marketing and external environmental advocacy role in the waste/environmental sector is very credible and he has a highly respected profile.

Commitment to Sustainability

John has a commitment to the community, environment and business. He is a member of the Business Sustainability Round Table – Hobart, a group focused on implementing sustainability into business. He also serves as the Chairman of The Tasmanian Polar Network, a peak industry group representing the Antarctic and Southern Ocean business and science/research/education community.
